Rarebooksclub.com, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1907 edition. Excerpt: .thoroughly the structural features of the paper, and may later add some discussion, but would be glad if the author could give some information as to the stresses, particularly on the columns and beams. The columns seem rather small in sectional area. Probably the specification shows the stresses, and that information might be added to the paper. In connection with the design of the columns. The ratio of the elasticity of the two materials has to be taken into account, as well as the proportion of the load to be carried by each of the materials. The helix used will not carry much of the load. Mr. W. D. Lawrence (Stud. Can. Soc. C. E.)--From a hurried examination of the columns supporting the roof, the speaker would say that the stresses are very low. The columns are approximately 14 square, and, neglecting the carrying-power of the steel, the greatest stress in the concrete, even with a snow-load of 75 pounds, would only be about 250 pounds per square inch. Not knowing the loading of the floors, it is, of course, impossible to estimate what the stresses will be on the lower sections of the columns. Regarding the strength of joints in beam, there seems to be no Mr. Lawrence reason to doubt an efficiency of 85%. being attained. In building the reinforced concrete reservoir for the City of Mexico, the joints in the girders supporting the roof were made near the ends of the...
